

Best approach to develop BCPs

Streamline the traditional approach to make BCP development manageable and repeatable.

FOCUS

Focus on resilience more than risk mitigation. You can't predict (and therefore specifically mitigate) every possible risk.

IDENTIFY

BCP requires identifying current business functions – leverage this task to also uncover inefficiencies and optimize business processes.

EXECUTE

The traditional approach to BCP is a massive project that most organizations can't execute without hiring a consultant. To execute BCP in-house, start with a small BCP pilot to establish the methodology and create a template that the rest of the organization can follow.

ADAPT

Avoid the typical scenario planning approach that calls for a separate plan for each "what-if" scenario. Instead, develop one plan that can be adapted to different scenarios, which also reduces the effort to maintain your BCP.

Traditional vs Streamline Approach to BCPs

Streamline the traditional approach to make BCP development manageable and repeatable.

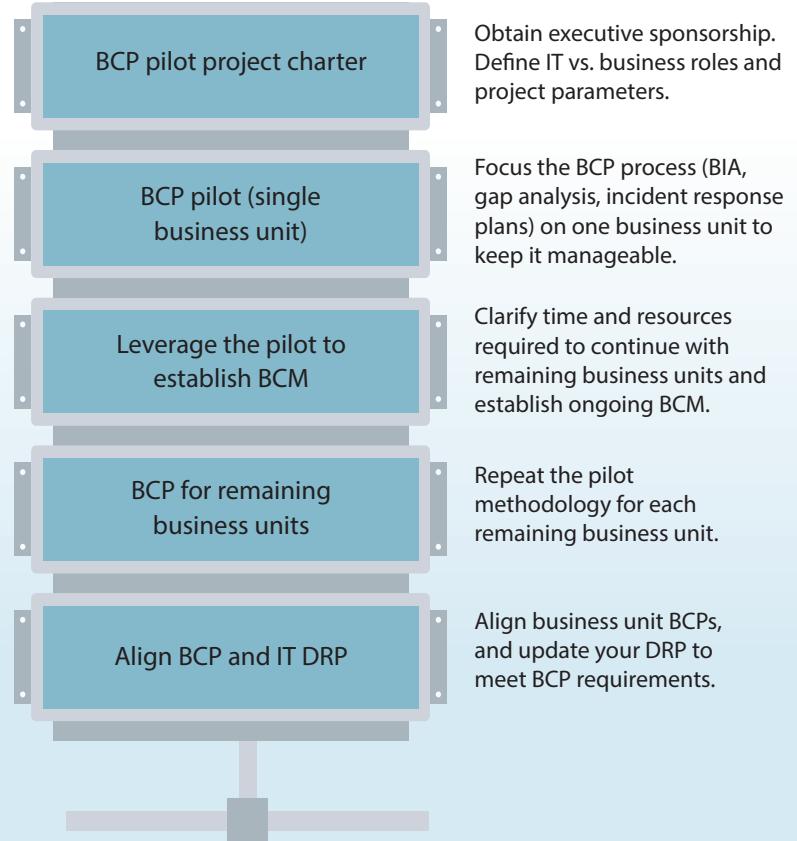

Traditional Business Continuity Management (BCM Lifecycle)

Build BCM one layer at a time across the organization. This can be an effective approach if you have dedicated staff or hire a consulting team to drive the project, but a massive project to undertake on a part-time basis.

Streamlined Approach Starts With a BCP Pilot

Focus on developing the BCP one business unit at a time, which then drives ongoing BCM for the organization.
